

News Release

EMBARGOED UNTIL RELEASE AT 10:00 A.M. EST, FRIDAY, DECEMBER 20, 2019

BEA 19-70

Technical: Brian Smith (Personal Income) (301) 278-9625 piniwd@bea.gov
 Harvey Davis (PCE) (301) 278-9086 pce@bea.gov
 Media: Jeannine Aversa (301) 278-9003 Jeannine.Aversa@bea.gov

Personal Income and Outlays, November 2019

Personal income increased \$101.7 billion (0.5 percent) in November according to estimates released today by the Bureau of Economic Analysis. **Disposable personal income** (DPI) increased \$87.7 billion (0.5 percent) and **personal consumption expenditures** (PCE) increased \$64.9 billion (0.4 percent).

Real DPI increased 0.4 percent in November, and **real PCE** increased 0.3 percent. The **PCE price index** increased 0.2 percent. Excluding food and energy, the PCE price index increased 0.1 percent.

	2019				
	July	Aug.	Sept.	Oct.	Nov.
	Percent change from preceding month				
Personal income:					
Current dollars	0.1	0.5	0.3	0.1	0.5
Disposable personal income:					
Current dollars	0.3	0.6	0.4	0.0	0.5
Chained (2012) dollars	0.0	0.6	0.4	-0.2	0.4
Personal consumption expenditures (PCE):					
Current dollars	0.5	0.3	0.2	0.3	0.4
Chained (2012) dollars	0.3	0.2	0.2	0.1	0.3
Price indexes:					
PCE	0.2	0.0	0.0	0.2	0.2
PCE, excluding food and energy	0.2	0.1	0.1	0.1	0.1
	Percent change from month one year ago				
Price indexes:					
PCE	1.4	1.4	1.3	1.4	1.5
PCE, excluding food and energy	1.6	1.8	1.7	1.7	1.6

The increase in personal income in November primarily reflected increases in compensation of employees, farm proprietors' income, and personal interest income (table 3).

The \$37.8 billion increase in real PCE in November reflected an increase of \$22.6 billion in spending for goods and a \$17.1 billion increase in spending for services (table 7). Within goods, spending on new motor vehicles was the leading contributor. Within services, spending on health care was the leading contributor. Detailed information on monthly real PCE spending can be found in [Table 2.3.6U](#).

Personal outlays increased \$68.6 billion in November (table 3). **Personal saving** was \$1.31 trillion in November and the **personal saving rate**, personal saving as a percentage of disposable personal income, was 7.9 percent (table 1).

Updates to Personal Income and Outlays

Estimates have been updated for July through October. Revised and previously published changes from the preceding month for current-dollar personal income, and for current-dollar and chained (2012) dollar DPI and PCE, are shown below.

Definitions

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

Disposable personal income is the income available to persons for spending or saving. It is equal to personal income less personal current taxes.

Personal consumption expenditures (PCE) is the value of the goods and services purchased by, or on the behalf of, "persons" who reside in the United States.

Personal outlays is the sum of PCE, personal interest payments, and personal current transfer payments.

Personal saving is personal income less personal outlays and personal current taxes.

The **personal saving rate** is personal saving as a percentage of disposable personal income.

Current-dollar estimates are valued in the prices of the period when the transactions occurred—that is, at "market value." Also referred to as "nominal estimates" or as "current-price estimates."

Real values are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

For more definitions, see the [Glossary: National Income and Product Accounts](#).

Statistical conventions

Annual rates. Monthly and quarterly values are expressed at seasonally-adjusted annual rates (SAAR). Dollar changes are calculated as the difference between these SAAR values. For detail, see the FAQ "[Why does BEA publish estimates at annual rates?](#)"

Month-to-month percent changes are calculated from unrounded data and are not annualized.

Quarter-to-quarter percent changes are calculated from unrounded data and are displayed at annual rates. For detail, see the FAQ "[How is average annual growth calculated?](#)"

Quantities and prices. Quantities, or "real" volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity and price indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (months for monthly data, quarters for quarterly data and annuals for annual data). For details on the calculation of quantity and price indexes, see Chapter 4: Estimating Methods in the [NIPA Handbook](#).

Chained-dollar values are calculated by multiplying the quantity index by the current dollar value in the reference year (2012) and then dividing by 100. Percent changes calculated from real quantity indexes and chained-dollar levels are conceptually the same; any differences are due to rounding. Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, a "residual" line shows the difference between the sum of detailed chained-dollar series and its corresponding aggregate.

p Preliminary

r Revised

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.

2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

4. Consists of nonmortgage interest paid by households. Note that mortgage interest paid by households is an expense item in the calculation of rental income of persons.

5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

6. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual and quarterly estimates are averages of the monthly estimates.

r Revised

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.

2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

4. Consists of nonmortgage interest paid by households. Note that mortgage interest paid by households is an expense item in the calculation of rental income of persons.

5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

6. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual and quarterly estimates are averages of the monthly estimates.

1. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

2. Consists of gasoline and other energy goods and of electricity and gas services.

3. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.
