

News Release

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EST, THURSDAY, NOVEMBER 15, 2018

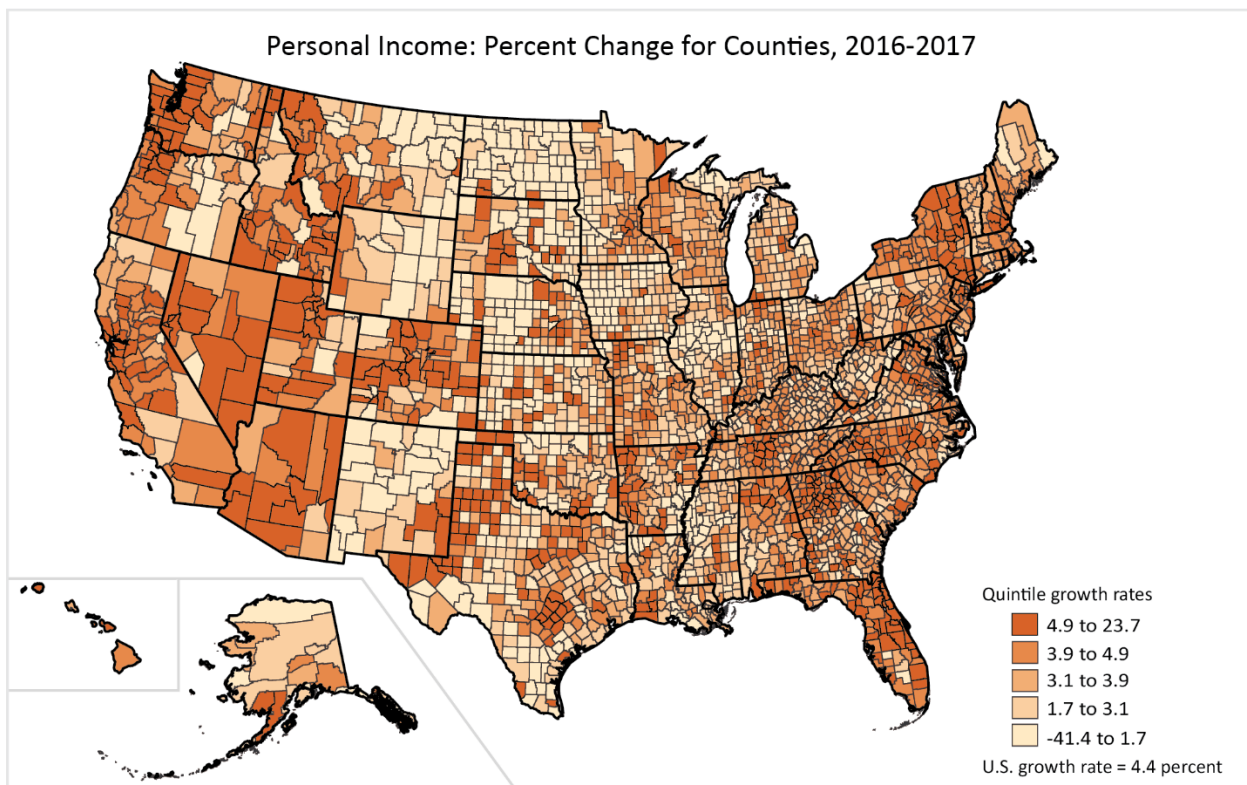

BEA 18-63

Technical: David G. Lenze (301) 278-9292 reis@bea.gov
 Jeff Newman (301) 278-9265
 Media: Jeannine Aversa (301) 278-9003 Jeannine.Aversa@bea.gov

Local Area Personal Income

New Estimates for 2017; Comprehensive Updates for 2001-2016

Personal income increased in 2,787 counties, decreased in 318, and was unchanged in 8 in 2017, according to estimates released today by the U.S. Bureau of Economic Analysis (BEA). Personal income increased 4.5 percent in the metropolitan portion of the United States and increased 3.2 percent in the nonmetropolitan portion in 2017. The change in personal income ranged from -41.4 percent in Slope County, North Dakota to 23.7 percent in Crosby County, Texas in 2017 ([BEA interactive data](#)).

U.S. Bureau of Economic Analysis

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or unincorporated business, from the ownership of financial assets, and from government and business in the form of transfer receipts. It includes income from domestic sources as well as from the rest of the world.

The **total dollar levels of personal income** ranged from \$6.1 million in Loving County, Texas to \$593.7 billion in Los Angeles County, California in 2017.

Per capita personal income—personal income divided by population—is a useful metric for making comparisons of the level of personal income across counties. Table 1 presents estimates of per capita personal income by state and county. In 2017, it ranged from \$11,937 in Issaquena County, Mississippi to \$233,860 in Teton County, Wyoming. Per capita personal income exceeded \$100,000 in 12 counties: Teton, Wyoming; New York, New York; Pitkin, Colorado; Bristol Bay, Alaska; Marin, California; Summit, Utah; San Francisco, California; Nantucket, Massachusetts; San Mateo, California; Fairfield, Connecticut; Blaine, Idaho; and Westchester, New York.

The county personal income estimates released today continue the successively more detailed series of data releases from BEA depicting the geographic distribution of the nation's personal income for 2017. National estimates of personal income for 2017 were first released in January 2018, followed by preliminary state personal income estimates in March. The personal income estimates released today provide the first glimpse of personal income for 2017 in counties and metropolitan statistical areas. The geographic picture will be completed with the release of real personal income for states, metropolitan areas, and state metropolitan and nonmetropolitan portions on May 16, 2019.

Comprehensive Update of Local Area Personal Income

The estimates of 2017 local area personal income released today incorporate the results of BEA's comprehensive update of local area personal income for 2001-2016. The comprehensive update incorporates source data that are more complete and more detailed than previously available, updates to methodologies, the results of the July 2018 comprehensive update of the National Income and Product Accounts, and the results of the September 2018 comprehensive update of state personal income.

Today's release is limited to local area personal income for 2001-2017 on the North American Industry Classification System (NAICS). Revised Standard Industrial Classification local area personal income estimates for 1969-2000 will be released in early 2019.

Next release: May 16, 2019 at 8:30 A.M. EDT
Real Personal Income for States and Metropolitan Areas, 2017

Additional Information

Definitions

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

Per capita personal income is calculated as the total personal income of the residents of a given area divided by the population of the area. In computing per capita personal income, BEA uses Census Bureau mid-year population estimates.

Personal income is measured before the deduction of personal income taxes and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

The estimate of personal income for the United States is the sum of the state estimates and the estimate for the District of Columbia; it differs slightly from the estimate of personal income in the national income and product accounts (NIPAs) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Uses of Local Area Personal Income Statistics

Local area personal income statistics provide a framework for analyzing current economic conditions in local economies and can serve as a basis for decision making. For example, they can be used:

- in economic models to project tax revenues and the demand for public utilities and services,
- to determine areas for locating, expanding, and closing businesses,
- to analyze the economic impact of disasters, and
- to determine whether an area has sufficient income to undertake and support specific projects and activities to encourage economic development.

1. Per capita personal income was computed using Census Bureau midyear population estimates. Estimates reflect county population estimates available as of March 2018.

2. Virginia combination areas consist of one or two independent cities with populations of less than 100,000 combined with an adjacent county. The county name appears first, followed by the city name(s). Separate estimates for the jurisdictions making up the combination areas are not available.
