

FOR WIRE TRANSMISSION: 8:30 A.M. EDT, FRIDAY, APRIL 30, 1999

Virginia H. Mannering: (202) 606-5304  
Recorded message: 606-5306

BEA 99-11

#### GROSS DOMESTIC PRODUCT: FIRST QUARTER 1999 (ADVANCE)

Real gross domestic product -- the output of goods and services produced by labor and property located in the United States -- increased at an annual rate of 4.5 percent in the first quarter of 1999, according to advance estimates released by the Commerce Department's Bureau of Economic Analysis. In the fourth quarter, real GDP increased 6.0 percent. Real GDP increased \$84.8 billion in the first quarter, following an increase of \$111.2 billion in the fourth.

The Bureau emphasized that the first-quarter estimates are based on preliminary and incomplete source data. Information on the assumptions used for missing source data is available on request. Revised estimates based on more comprehensive data will be issued next month.

The major contributors to the increase in real GDP in the first quarter were personal consumption expenditures and fixed investment. The contributions of these components were partially offset by the effects of a decrease in exports and an increase in imports. The deceleration in real GDP in the first quarter reflected a downturn in exports.

The price index for gross domestic purchases, which measures prices paid by U.S. residents, increased 1.0 percent in the first quarter, compared with an increase of 0.9 percent in the fourth.

Real personal consumption expenditures increased 6.7 percent in the first quarter, compared with an increase of 5.0 percent in the fourth. Durable goods purchases increased 11.5 percent, compared with an increase of 24.5 percent. Nondurable goods increased 9.2 percent, compared with an increase of 4.2 percent. Services expenditures increased 4.5 percent, compared with an increase of 1.7 percent.

Real nonresidential fixed investment increased 7.6 percent in the first quarter, compared with an increase of 14.6 percent in the fourth. Nonresidential structures decreased 0.1 percent, in contrast to an increase of 6.0 percent. Producers' durable equipment increased 10.5 percent, compared with an increase of 17.8 percent. Real residential fixed investment increased 15.6 percent, compared with an increase of 10.0 percent.

Real exports of goods and services decreased 7.7 percent in the first quarter, in contrast to an increase of 19.7 percent in the fourth. Real imports of goods and services increased 11.7 percent, compared with an increase of 12.0 percent.

Real federal government consumption expenditures and gross investment decreased 0.7 percent in the first quarter, in contrast to an increase of 7.3 percent in the fourth. National defense decreased 4.2 percent, in contrast to an increase of 1.3 percent. Nondefense increased 6.3 percent, compared with an increase of 19.8 percent. Real state and local government consumption expenditures and gross investment increased 7.3 percent, compared with an increase of 1.3 percent.

The real change in business inventories subtracted 0.07 percentage point from the first-quarter change in real GDP, after subtracting 0.54 percentage point from the fourth-quarter change. Businesses increased inventories \$45.2 billion in the first quarter, following increases of \$44.2 billion in the fourth quarter and \$55.7 billion in the third.

Real final sales of domestic product -- GDP less change in business inventories -- increased 4.5 percent in the first quarter, compared with an increase of 6.6 percent in the fourth.

#### Gross domestic purchases

Real gross domestic purchases -- purchases by U.S. residents of goods and services wherever produced -- increased 6.8 percent in the first quarter, compared with an increase of 5.4 percent in the fourth.

#### Disposition of personal income

Current-dollar personal income increased \$95.9 billion in the first quarter, compared with an increase of \$97.1 billion in the fourth. Personal tax and nontax payments increased \$11.6 billion, compared with an increase of \$16.5 billion.

Disposable personal income increased \$84.2 billion in the first quarter, compared with an increase of \$80.7 billion in the fourth. Real disposable personal income increased 4.6 percent, compared with an increase of 4.3 percent.

Personal outlays increased \$114.6 billion in the first quarter, compared with an increase of \$93.8 billion in the fourth. Personal saving -- disposable personal income less personal outlays -- was a negative \$30.9 billion in the first quarter, compared with a negative \$0.6 billion in the fourth. The saving rate -- saving as a percentage of disposable personal income -- decreased from zero percent in the fourth quarter to a negative 0.5 percent in the first.

#### Current-dollar GDP

Current-dollar GDP -- the market value of the nation's output of goods and services -- increased 6.0 percent, or \$126.7 billion, in the first quarter. In the fourth quarter, current-dollar GDP increased 6.9 percent, or \$143.3 billion.

BEA's major national, international, regional, and industry estimates; the Survey of Current Business; and BEA news releases are available on BEA's web site:

<http://www.bea.doc.gov>

STAT-USA maintains an electronic bulletin board (EBB) and an Internet site, which contain BEA estimates, BEA news releases, and the Survey of Current Business. The information available through STAT-USA is often more detailed and more timely than that available from other sources. To subscribe to STAT-USA's World Wide Web system, go to: <http://www.stat-usa.gov>. Subscriptions for single-user unlimited access to STAT-USA's Internet information are \$50.00 for 3 months or \$150.00 for 1 year. For further information, call (202) 482-1986.

Summary BEA estimates are available on recorded messages at the time of public release at the following telephone numbers:

- (202) 606-5306 Gross domestic product
- 606-5303 Personal income and outlays
- 606-5362 Summary of international transactions

Most of BEA's estimates and analyses appear in the Survey of Current Business, BEA's monthly journal. The printed Survey of Current Business is available from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. First class mail: Annual subscription \$88.00 domestic. Second class mail: Annual subscription \$39.00 domestic, \$48.75 foreign; single issue \$14.00 domestic, \$17.50 foreign.

Next release -- May 27, 1999, at 8:30 A.M. EDT for:  
Gross Domestic Product: First Quarter 1999 (Preliminary)  
Corporate Profits: First Quarter 1999

## Comparisons of Revisions to GDP

Quarterly estimates of GDP are released on the following schedule: "Advance" estimates, based on preliminary and incomplete source data and BEA assumptions about missing source data, are released near the end of the first month after the end of the quarter; as more detailed and more comprehensive data become available, "preliminary" and "final" estimates, are released near the end of the second and third months, respectively. The "latest" estimates reflect the results of both annual and comprehensive revisions.

Annual revisions are usually carried out each summer and cover the quarters of the most recent calendar year and of the 2 preceding years. Comprehensive (or benchmark) revisions are carried out at about 5-year intervals and incorporate definitional and classificational changes that update the accounts to portray more accurately the evolving U.S. economy and statistical changes that update the accounts to reflect the introduction of new and improved methodologies and the incorporation of newly available and revised source data.

The table below shows comparisons of the revisions between quarterly percent changes of GDP for the different vintages of the estimates. These comparisons can be used to assess the likely size of future revisions. For example, two-thirds of the revisions between the quarterly change in the advance estimate of real GDP and that in the final estimate were within a range of -0.6 to +0.9 percentage point. Thus, based on past history, the fourth-quarter change in real GDP now estimated at 5.6 percent at an annual rate, is not likely to be revised below 5.0 percent or above 6.5 percent in the next two releases.

Revisions Between Quarterly Percent Changes of GDP: Vintage Comparisons  
[Annual rates]

Vintages compared	Average without regard to sign	Range	
		Two-thirds of revisions	Nine-tenths of revisions
Current-dollar GDP			
Advance to preliminary.....	0.6	-0.5 to 0.8	-1.1 to 1.4
Advance to final.....	.7	-.6 to 1.0	-1.0 to 1.6
Preliminary to final.....	.3	-.3 to .4	-.6 to .7
Advance to latest.....	1.3	-.8 to 2.1	-1.6 to 3.3
Preliminary to latest.....	1.2	-1.1 to 2.1	-1.7 to 2.9
Final to latest.....	1.2	-.9 to 2.0	-1.9 to 2.8
Real GDP			
Advance to preliminary.....	0.5	-0.5 to 0.7	-0.9 to 1.4
Advance to final.....	.6	-.6 to .9	-1.0 to 1.3
Preliminary to final.....	.3	-.4 to .4	-.5 to .7
Advance to latest.....	1.4	-1.3 to 1.7	-1.9 to 3.0
Preliminary to latest.....	1.4	-1.2 to 1.6	-2.3 to 3.0
Final to latest.....	1.4	-1.5 to 1.9	-2.2 to 3.0

NOTE.--These comparisons are based on the period from 1978 through 1997 for the first three comparisons in each group and on the period from 1978 through 1995 for the last three comparisons in each group.

Note.--Users are cautioned that particularly for components for which relative prices are changing rapidly, the use of chained-dollar estimates to calculate component shares or component contributions to real growth may be misleading even just a few years from the base year. For accurate estimates of the contributions to percent changes in real GDP, use table 2.

See "Explanatory Note" at the end of the tables.

Table 4.--Chain-Type Price Indexes for Gross Domestic Product and Related Measures: Percent Change From Preceding Period [Percent; quarters seasonally adjusted at annual rates]

	1996	1997	1998	II 95	III 95	IV 95	I 96	II 96	III 96	IV 96	I 97	II 97	III 97	IV 97	I 98	II 98	III 98	IV 98	I 99
Gross domestic product (GDP).....	1.9	1.9	1.0	2.0	1.9	2.0	2.2	1.4	1.8	1.6	2.8	1.7	1.2	1.1	.9	.9	1.0	.8	1.4

1. For some components of final sales of computers, includes computer parts.

2. Farm output less intermediate goods and services purchased.

3. Consists of GDP less gross product of farm, of housing, of households and institutions, and of general government.

See "Explanatory Note" at the end of the tables.

### Explanatory Note: Measures of Output and Prices

This note describes the chain-type quantity and price indexes that, in combination with the current-dollar estimates, provide users with the basic data series from which all other analytical tables and presentations of GDP are derived.

Changes in current-dollar GDP measure changes in the market value of goods, services, and structures produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. Prices are expressed as index numbers with the base period at present, the year 1992--equal to 100. Quantities, or "real" measures, are expressed as index numbers with the base period (1992) equal to 100. (The current-dollar values and price indexes for most GDP components are determined largely using data from federal government surveys. The real values (expressed with 1992 as the base period) of these components are calculated by deflation at the most detailed level for which all the required data are available by dividing the current-dollar value of the component by its price index, where the price index uses 1992 as the base period.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent years. (Similar formulas are used to calculate the quarterly indexes for the most recent quarters, called the "tail" period and for the indexes for the other quarters, called the "historical period.") For example, the 1996-97 annual percent change in real GDP uses prices for 1996 and 1997 as weights, and the 1996-97 annual percent change in price uses quantities for 1996 and 1997 as weights. These annual changes are "chained" (multiplied) together to form time series of quantity and price. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias associated with changes in quantities and prices calculated using a fixed-weighted formula. The Fisher formula also produces changes in quantities and prices that are not affected by the choice of base periods. In addition, because the changes in quantities and prices calculated in this way are symmetric, in general, the product of a quantity index and the corresponding price index equals the current-dollar index. (BEA also publishes a measure of the price level, known as the "implicit price deflator (IPD)," which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100. The values of the IPD are very close to the values of the corresponding "chain-type" price index for all periods.)

Chain-type quantity and price indexes for GDP and its major components are presented in this release as index numbers in table 5 and in the form of percentage changes from the preceding period in tables 1, 4, 6A, and 6B. Contributions by major components to changes in real GDP are presented in table 2. BEA also prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1992) dollar estimates." For GDP and most other series, these estimates, which are presented in table 3, are computed by multiplying the 1992 current-dollar value by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 1992 and if real output for this component increased 10 percent in 1993, then the chained (1992) dollar value of this component in 1993 would be \$110 (\$100 x 1.10).

For analyses of changes over time in an aggregate or in a component, the percentage changes calculated from the chained-dollar estimates and from the chain-type quantity indexes are the same; any differences will be small and due to rounding. However, because the relative prices used as weights for any period other than the base period differ from those used for the base period, the chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP or to any intermediate aggregate. A measure of the extent of such differences is provided by a "residual" line, which indicates the difference between GDP (or an other major aggregate) and the sum of the most detailed components in the table. For periods close to the base year, when there usually has not been much change in the relative prices that are used as weights for the chain-type index, the residuals tend to be small, and the chained (1992) dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. As one moves further from the base period, the residual tends to become larger, and the chained-dollar estimates become less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, these calculations may be

misleading even just a few years from the base year. In such cases, table 2 on contributions provides a better basis for determining the composition of GDP growth than the chained-dollar estimates.
