

# Chief Data Officers Expert Group

**Presenter: Richard Allen**

**Members: Richard Allen, Greg Fortelny, Ted Kaouk**

October 2022

# Key Takeaways

---

## Expert Group Discussion

- The federal CDO community will have an important role in many of the recommended actions requiring coordination with OMB, ICSP, other federal councils, the NSDS, and amongst the CDOs.
- As managers of federal data, CDOs will have new responsibilities in appropriate sharing of data *and* the knowledge about those data assets to be shared in the NSDS.
- The practices for identifying access eligibility for sensitive data will be critical to the success of the NSDS and getting support of the full CDO community.
- The diversity of data knowledge domains is a challenge for creating data standards, requiring extensive coordination with stakeholders within each domain.

# Future Engagement

---

## Expert Group Discussion

- As OMB develops guidance the CDO community is poised to assist in development of that guidance and strategies for implementation of Title 2 guidance, especially as it relates to proper establishment of an NSDS.
- The federal CDOs must work with appropriate state, local, tribal, and other stakeholder groups, in concert with the NSDS, as we develop necessary data standards and standard processes.
- The pilots will require CDO engagement to ensure that the data used are properly documented with comprehensive descriptions of the data being shared, including appropriate uses.

# Summing It Up
